

Cooling system maintenance

Estimates project that more than 40% of the heavy-duty engine repair costs are related to the cooling system. It is critical that you receive maximum protection for your cooling system—with minimum maintenance hassle—to prevent downtime and lower your operating costs.

Our coolant is sourced from the Cummins Filtration Company. This coolant offers a heavy-duty product that provides a clear advantage over competitive antifreeze products by preventing liner pitting, corrosion and scale that can damage your heavy-duty cooling system. Our ES Complete Extended Life coolants are fully formulated and contain organic acids that provide superior diesel engine protection. Fairbanks International offers both EG in gallons and bulk and PG in gallons.

Remember, when checking antifreeze you should no longer use a ball floater. We now have test strips to check the freeze point as well as the formulation to check the status of your coolant.

Don't forget the coolant filters. These filters will remove harmful contaminants from the coolant, which will reduce engine wear and increase the service life of the engine.

Please check your operators manual for recommended service intervals of both the coolant and the coolant filters.
